

WORKSHOP

NAVA VENTILATION IN THE NICU

TURKU FINLAND

The purpose of this workshop is to increase the skills on the use of NAVA ventilation in the NICUs which already have some experience of NAVA and they have a Servo-i or Servo-n ventilator.

The workshop will focus on

- interpretation of the Edi signal
- utilization of the monitoring capabilities
- individualization of the treatment
- implementation of NAVA in the NICU

We aim to get together a group of NAVA users at the same level of NAVA experience. We encourage you to participate as a team of both doctor and nurse participants.

The theory sessions will be followed by visiting the NICU in Turku University Hospital and discussing the treatment strategies of the patients on NAVA ventilation at the time of the course. A patient case is invited from each participant to be discussed during the course.

TIME AND PLACE

The course will be held in September 5-6, 2019 in Turku, Finland by Dr Hanna Soukka and Professor Liisa Lehtonen at the University Hospital of Turku.

REGISTRATION AND ACCOMODATION

You can apply for the course by contacting Hanna Soukka at hanna.soukka@utu.fi or NAVA@tyks.fi before June 30, 2019. The registration fee is 600 € + taxes including the lunches and refreshments during the workshop. The participants are responsible to arrange their travelling and accommodation by themselves at their own expense
